DETAILED ACTION

Claim Objections

Claim 7 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Note that the subject matter of claim 7 is already cited in claim 1, from which it depends.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Coleman (6,397,826) in view of Ludwig et al (5,839,505). Note a cooling device 56 for a fuel-recirculation circuit from the injection system to the tank 44 of a motor vehicle, comprising a pipe designed to be traversed by the fuel and comprising a side wall, where the cooling device does not comprise a radiating plate connected in a direct thermal exchange manner to the pipe, the side wall being entirely surrounded with a cooling current of air, characterized in that the pipe is coiled and comprises an alternating succession of elbows and rectilinear stretches. Coleman shows everything except the side wall of the pipe having a plurality of longitudinally extending internal projections obtained by plastic deformation on the rectilinear stretches of the pipe. Ludwig et al teach that it is old in the art to employ a pipe having a plurality of longitudinally extending

projections obtained by plastic deformation on the rectilinear stretches of the pipe (see Figures 4-9). It would have been obvious to one having ordinary skill in the art to modify Coleman by employing a plurality of longitudinally extending projections on the rectilinear stretches of the pipe, in order to improve heat transfer efficiency of the heat transfer pipe.

Response to Arguments

Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the numerous additional references which all show various types of heat exchange pipes employing internal projections utilized to increase heat transfer efficiency.
